

## Text for Service Line

### Description

In this table, you pass on texts for the service line. You can pass on the following:

- In the field TEXT\_ID: the allowed text types (e.g. line text, service text)
- In the field TEXT\_FORM: a SAPscript format key
- In the field TEXT\_LINE: the actual text lines

If TEXT\_ID is empty, a line text is always generated. If FORMAT\_COL is empty, the standard format key \* is assigned.

For more information on the individual parameter fields, see the data element documentation in the ABAP Dictionary.
