

## FU BAPI\_PROJECT\_GETINFO

---

### Short Text

Read detailed information for work breakdown structures

### Functionality

You use this method to read detailed information about project definitions and the WBS elements of certain projects from the system.

### Notes

Enter the project definitions and/or the WBS elements, which you want detailed information about, in the parameter PROJECT\_DEFINITION or I\_WBS\_ELEMENT\_TABLE respectively. You cannot select according to project definition and WBS elements at the same time.

If you only enter project definitions, the details of all the WBS that belong to the project definitions are read including the hierarchy. If you explicitly enter WBS elements, only these are read.

Messages are returned in return parameters. For information about the return values and their meaning, see the parameter documentation.

### Parameters

PROJECT\_DEFINITION  
WITH\_ACTIVITIES  
WITH\_MILESTONES  
WITH\_SUBTREE  
E\_PROJECT\_DEFINITION  
RETURN  
I\_WBS\_ELEMENT\_TABLE  
E\_WBS\_ELEMENT\_TABLE  
E\_WBS\_MILESTONE\_TABLE  
E\_WBS\_HIERARCHIE\_TABLE  
E\_ACTIVITY\_TABLE  
E\_MESSAGE\_TABLE
