

Address of Vendor

Description

This table contains the vendor's address data. The central address management fields are used for this purpose.

Note

In method BAPI_PO_CHANGE, you should note the following restrictions for addresses:

- Addresses can only be created, they **cannot be changed**. If you want to change an address, you use method **BAPI_ADDRESSORG_CHANGE** (Basis -> Basis Services/Communication Interfaces -> AddressOrg -> Change).
- When you create addresses, this method does not check them. This means that an Enjoy purchase order may contain incorrect address data.

For more information on the individual parameter fields, see the data element documentation in the ABAP Dictionary.
