

## Assign Objects and Values

### Description

The IDX\_STRUCTURE table assigns the contents of individual tables to one another. In each row you must use an object that exists in the OBJECT\_INDEX. Additionally, you can choose to transfer a row with periodic values from the PER\_VALUE table or with fiscal year values from the TOT\_VALUE tables and a row with control data.

The VALUE\_INDEX field displays the values.

### Value range

The OBJECT\_INDEX field may only contain values that are contained in the OBJECT\_INDEX field of the OBJECT transfer table.

The VALUE\_INDEX field may only contain values that are contained in either the PER\_VALUE or TOT\_VALUE transfer tables in the VALUE\_INDEX field.
