

Field List for Additional Fields

Description

This parameter contains the fields from which you would like to transfer data in addition to the values from the standard fields **Ledger**, **Version**, **Company Code** and *Account*. The method uses the parameter for the following processes:

- Reading existing plan data and the corresponding account assignments from the database
- Determining the difference between the existing plan value and the target value from the Business Application Programming Interface (BAPI)
- Transferring the values determined to the database

Example:

If you want to transfer plan data for which the profit center is relevant in addition to the fields in the **HEADERINFO** parameter, you have to transfer the field PROFIT_CTR to the structure.

If you want to transfer plan data for which the customer field Z* (which you defined in the **EXTENSIONIN** parameter) is relevant, you also have to transfer this field to the structure.
