

Partner

Description

This structure enables you to maintain partners. Only one partner may be specified per partner role. If you specify more than this, the system issues an error message. It is also not possible to change the partner "vendor". This role is predefined via the PO header vendor.

The **partner roles** can be defined in Customizing. You can also define the language-dependent keys for the partner roles. This makes it possible to specify the partner roles in different languages (example: ordering address, language EN -> partner role OA; language DE -> partner role BA)

Parameter: POPARTNER

PARTNERDESC = OA
LANGU = EN
BUSPARTNO = 0000001000
PARTNERDESC = WL
LANGU = DE
BUSPARTNO = 0000001100
