

Activity Quantity

Definition

Total of the plan activity quantities per cost center and activity type in activity type planning.

Use

Field group for planning output per activity type of a cost center.

The product of the plan/actual quantity times the valid plan activity price equals the credit on the cost center per activity type.

Procedure

If you change or create the activity quantity in planning, you must define the corresponding field in the planning layout.

If the field in the planning layout is not defined, plan activity is displayed only.

Note

This field group can be posted in planning (plan activity) and actual (activity quantity).
