FU BAPI_BUS2054_GET_STATUS

_____

Short Text

Read Status for BUS2054 (Work Breakdown Structure)

Functionality

You can use the BAPI BAPI_BUS2054_GET_STATUS to read the active system statuses and user statuses for a list of PSP elements (BAPI_WBS_ELEMENTS).

The active system statuses in this case are output with the English-language key.

The active user statuses are output with the key of the log-on language if the translation of the status exists in the status profile in the log-on language, or if the maintenance language of the status profile corresponds to the log-on language.

If the status does not exist in the log-on language in the status profile, the key will be output in the maintenance language of the status profile.

Notes

The return parameter RETURN will contain an error message if an error occurred during processing. After the call, the table BAPI_STATUS_RESULT contains all messages that were created during processing.

Further information

You can find additional information in the SAP Library under Project System -> Structures -> Project System Interfaces -> PS-EPS Interface to External Project Management Systems.

Parameters

RETURN
I_WBS_ELEMENTS
E_SYSTEM_STATUS
